

Contract Furniture U.K.

Method Statement

General

1. All products are manufactured to comply to the Standard of the highest level for contract furniture.
2. All products are stained based upon a spray system. This gives a deep grain staining. This system ensures that the stained finish will not show wear over the life of the product given reasonable use.
3. We normally supply solid hardwood table tops 25mm thick, this enables re-sanding and re-polishing at a later date.
4. All tops are lacquered in a high solids acid catalyst lacquer, unique heat and scratch resistant. All bases and chairs are lacquered in pre catalyst lacquer enabling the re-polishing and refurbishment of these items at a later date.
5. All foams comply to CMHR industry standards – certificates available on request.
6. All Joints are secured using BS EN 204 Grade 2 PVA Adhesive, Screwed & Pinned.
7. Each Item is individually hand checked prior to despatch as part of our in house quality assurance system.
8. The majority of our chairs are upholstered on the seat with a pad, which is over locked to prevent fraying. The back panel is upholstered completely around the slats so you cannot see them from the back.
9. We then wrap table tops in Polyethylene Foam to prevent damage during transit.
